ORAN 755. a

ALMANACK⁵

for the Year of our

LORD GOD

1708.

Being the Bissextile or Leap - Year,
and from the Worlds Creation, 5657.

Wherein is contained the Lunations, Conjunctions and Aspects of the Planets, the increase, decrease and length of the day and night, with the rising, southing and setting of the Planets and fixed Stars throughout the Year, whereby may be known the exact hour of the night at all times, when either Moon or Stars are seen.

Calculated according to Art, and referred to the Horizon of the antient and renowned Borough-Town of *Stamford*, whose Longitude is 24 deg. 20 min. and Latitude 52 deg. 41 min. fitting all the middle Counties of ENGLAND, and without sensible errour the whole Kingdom.

By JOHN WING, Math.

LONDON

Printed by J. Dawks, for the Company
of STATIONERS. 1708.

Wing, 1708.

The Terms and their returns this Year

Hilary Term begins	Octab. Hilar. January.
January 23, and ends	Quind. Hilar. January
February 12, and hath	Craft. Purif. February
4 returns, viz.	Octab. Purif. February
Easter Term begins	Quind. Pasch. April
April 21, and ends May	Tres Pasch April
17, and hath 5 returns.	Mens. Pasch. May
	Quinq. Pasch. May
	Craft. Ascen. May
	Craft. Trin. May
Trinity Term begins	Octab. Trin. June
June 4, and ends June	Quind. Trin June
23, and hath 4 returns.	Tres. Trin. June
Michaelmas Term be-	Tres. Mich. October
gins October 23, and	Mens. Mich. October
ends November 29, and	Craft. Anim. November
hath 6 returns.	Craft. Mart. November
	Octab. Mart. November
	Quind. Mart. November

Good are the Laws if they be right apply'd,
But from them often Lawyers step aside.

The Bright and Glorious Planet *Venus* is our Evening Star
the 20th day of *August*; from thence she shineth in the Mo
to the end of the Year.

This Table shews the Interest of any sum of Money from 1 s. to 100 l. from a day to a year. And by the help of Addition you compute the Interest of any sum whatsoever. And note, that for greater exactness the penny is divided into a 100 parts, so that 25 are a farthing, and 50 parts an half-penny, and 75 parts 3 farthings, &c.

Example:

The Interest of 100 l. for six months one Week and one day, is thus found by the Table.

l. s. d. q.
 for 6 mon. 03--0--0--00
 for 1 week, 00--2--3--61
 for a day, 00--0--3--94
 03--2--7--55
 A 2

l. s. d.
 viz. 3--2--7 half-penny

Wing 1708.

A Regal Table in a more exact manner.

Here Gods Vicegerents do in order stand,
And how Successively each Rul'd the Land :
May we not want a Monarch great indeed,
Wise, Good and Gracious, Merciful in Need :
For such a one may all good Christians stand,
Both now and always for to Rule this Land.

June 1708.

The { 3 day at noon ♂ }
 { 7 day at 2 in the morn h } is with the Moon.
 { 7 day at 2 afternoon ♀ }
 { 10 day at 4 afternoon ♀ }
 { 13 day at 9 in the morn ♀ }

1	9	11	England be thankful, Peace and Plenty at-
2	9	12	tends thee.
3	9	13	<i>Virgins Spick</i> South, 40 min. past 7 at night
4	9	14	and sets 50 min. after midnight.
5	9	15	<i>Seven Stars</i> rises 43 min. past 1 in the morn.
6	9	15	and sets 3 min. past 6 in the afternoon.
7	9	16	
8	9	16	
9	9	16	<i>Arcturus</i> South, 5 min. past 8 at night, and
10	9	16	sets at 4 in the morning.
11	*	*	Longest day at <i>Stamford</i> , 16 hours 38 min.
12	0	0	<i>Scorpion's Heart</i> South at 10 at night, and
13	0	0	sets 3 2 min. past 1 in the morning.
14	0	0	
15	0	1	
16	0	1	
17	0	2	Head of <i>Hercules</i> South 28 min. 10 at night,
18	0	3	and sets 46 min. past 5 in the morning.
19	0	3	<i>Virgins Spick</i> South 28 min. past 6 at night,
20	0	4	Let London beware of some Misfortune.
21	0	5	<i>Virgins Spick</i> sets 31 min. past 11 at night.
22	0	6	
23	0	7	
24	0	8	Day 16 hours and a half long.
25	0	9	
26	0	10	<i>Si pes in terris, mens sit in Cælis.</i>
27	0	12	How do our wretched times degenerate,
28	0	14	From former Ages how intemperate;
29	0	16	To feel new Lusts, and Youthful flames again
30	0	18	And serve another Prentiship to Sin.

July hath xxxi days.

WING.

A

PROGNOSTICATION,

For the Year of our

LORD GOD,

1708.

Being the Bissextile or Leap-Year.

Wherein is contain'd the time of the Sun's Ingress into the four Cardinal Signs ; with a Figure of the Heavens at the time of the Sun's Ingress into *Aries*, from whence the State of the Year is Predicted. An Account of the Eclipses. A Table shewing the Hour of the Day by a Rod or Hand-stick : Also a pleasant Chronology of Memorable things since the Creation of the World.

By *John Wing*, Math.

L O N D O N :

Printed by *W. Pearson*, for the Company of
STATIONERS, 1708.

A Table shewing the true Hour of the Day by a plain Staff
divided into 10 equal Parts.

* * * Note: That q stands for
Quadrans a quarter of a part;
f for Semissis half; and d for
Dedans three quarters of a Part.

Wing, 1708.

To find the true Hour of the Day
by the former T A B L E.

TAKE a Staff of what length you please, and with a pair of Compasses divide it into ten equal Parts marking them upon the Staff; then in some level Place where the Sun doth shine, set it upright, and mark where the end of the Shadow falls; which done measure with your Staff the length of the Shadow, and Note the Parts it contains, which find out in this Table right against the Day of the Month, and over head you will find the true Hour of the Day; as will appear more clearly by Example.

Suppose the 9 of *April* or 13 of *August* I should find the shadow of the Staff to be 30 Parts and a quarter of a part more, that is, three Staffs length, and a quarter of a Part, therefore seeking in the Table, against the said Days, I find 309. which is 30 Parts and a quarter; and I see over head that it is then either 7 a Clock in the Morning, or 5 in the Afternoon; so that if your Observation was in the Morning, it was 7; but if in the Afternoon, 5 a Clock.

Thus the 13 of *February*, or 8 of *October*, if the shadow of the Staff be just 19 Parts, it is 12 a Clock, if 20 it's one a Clock, if 24 two a Clock, if the Observation be made in the Afternoon.

Thus you see the Hour of the Day is exactly and speedily found, by a Rod or Staff and the help of this Table; so likewise by the Kalendar part may the Hour of the Night be known either by the Moon, Planets, or Fixed Stars, being of excellent use to all sorts of Men.

Sweet are the Pleasures of the Cheerful Spring,
 Which doth Revive and Comfort every thing;
 Dame Flora in her Orb doth shine full bright,
 Who Phebus like, Adorns the Earth with Light.
 No want of Light, good turns, and what is good,
 If things amongst us were but understood:
 'Tis much God's Judgments do not overtake us,
 And that his Mercies do not quite forsake us.
 Our Sins are great, and call for Vengeance too,
 And has for some time since as well as now;
 Tho' bless'd with Favours, and from Danger free,
 Crown'd with Success, and Noble Victory.
 Tho' this and more with us, yet will not take,
 Nor can't prevail our drowzy Souls to wake.
 To live in Favour both with God and Man,
 Must ever stand for good, deny't who can.
 Since this is best let us joyn with hand and Heart;
 And all that's Naught for ever set a part,

Of the Spring Quarter.

THe Spring Quarter begins March the 9th Day 31 Min. 25 Seconds past Noon in the Meridian of Stamford, which Instant 2 Degrees 40 Min. of Leo Ascends, and 8 Degrees 10 Minutes of Aries is upon the Mid-heaven, at which time

time the chief Configurations are Δ ♄ ♄, * ♄ ☉, * ♄ ♄, \square ♄ ♄, * ♄ ♄, * ♄ ♄, * ♄ ♄, and the Moon applying to the opposition of ♄; thus are the Planets Aspected, and all (♄ excepted) direct in Motion. In the Preventional Full Moon, she happens to be in Opposition to her place in this Ingress, and in Square to the place of ♄ there, but applying to a Conjunction of ♄, but the Postventional New Moon happening so near the time of this Ingress, there is little to be drawn from thence.

Wing, 1708.

The generality of the present Position of the Heavenly Bodies seems to incline more to Peace than Wars, for the all or most of these Configurations are of a Propitious and Benign Quality, and seems to promote an Universal Peace tho' there is something very remarkable (as time has already discovered) concerning the great \odot of h and z in v , May 1702. With a considerable number since of other Malignant Aspects and Configurations of the Superior Planets, which may rather seem to transfer the War from one Country to another, than to Establish an Universal Peace. Let Spain put on those Considerations as may for the future best suit her turn. France too will be presently made more sensible of her promoting and continuing of a long and unjust War. Many and strange Alterations are like to happen in a very short time there. And great Store of Actions in several of the South and South-East parts of the World both by Sea and Land, which will shake the Foundation of no small Government, and according to these Positions, we in England have least Reason to distrust better times, than any of our Neighbouring Nations, if we be not infested with a time of Sickness and great Mortality, by some strange and Rageing Distemper: There are many strange things more Presignified, by the Preceding Configurations, especially by that great and famous Conjunction in 1702, as I before Intimated: for the Confirmation thereof I shall make some Remarks of what has happen'd in former Ages, upon such Conjunctions; for under this Trigon has ever been Observed Notable Alterations and Changes in the World, both in Church and State, as Wars, Church-Factions, and ill Government has happen'd and broke out in the World, as I might shew out of the Chronicles of this and other Nations, and also from the Writings of the most expert Astrologers, was it either needful or proper; but it may suffice to look upon this present War, under the first Fiery Trigon, and find what a Rav'd Condition all Europe is now involv'd in, tho' in the end will produce an Honourable Peace: for we have it from Authors of no small Account

Wing, 1708.

Account, that the Conjunction of these two Pondrous Planets in the first Trigon, produces Empires, Tranquility, Peace, many Wise and Famous Men appear, tho' Barrenness in the Earth by reason of the Fiery Trigon, as our own Experience now testifieth.

In the time of *Julius Caesar*, under the first Trigon (as here) the Roman Monarchy was Established, the Gospel of Christ Preached by the Apostles, the Destruction of Idolatry, and the Exercise of Justice and Piety, and the Sacerdotal Monarchy Erected, and for the space of 200 Years (whilst the Conjunction was made in this Trigon (both Monarchy and the Divine Law prevailed, that for and in the Defence thereof innumerable multitudes of Religious men suffered Martyrdom, which was signified by δ Ld. of γ : For six Years before the Birth of our Blessed Saviour, there happen'd a great Conjunction of the Planets in Aires (as here) and after 800 Years (when the Conjunction return'd again to this Trigon) arose the New Monarchy of *CHARLES* the Great in the West, insomuch that *Cardan* is of Opinion *cum caepius Conjunctiones ad Trigonam primum, redire futuram novam Potentissimam, totius Mundi Monarchiam, ut omnia regantur nutu unius.* Now the Conjunctions are returned again to the first Triangularity, it shews that Alterations of Government shall happen in the World, wherein all things shall be Governed in much better Order than formerly.

But because I would avoid Prolixity, I shall here give you the Opinion of some able Astrologers, touching the Effects of this Conjunction, as they particularly made their own Observations.

Ranzovius pronounces, that Governors of Provinces will bend all their endeavours to promote and to maintain Peace and Concord, to do Justice, and shall also Establish good and wholesome Laws.

Massabalab

Wing, 1708.

Messababab saith, That when Ψ shall be stronger than Υ (as he was at the Conjunction) it signifies much good in and during the Effects of that Conjunction.

Alstedius saith, that the Fire of this Conjunction shall consume all the Dregs and Dregs of the City of *Rome*.

Daspedius affirms, That Empires and Monarchies will be erected and confirmed, that there shall be great Tranquility in the World, and many Wise and Famous Men appear. The same says *Campanella*.

Reslin says, that as Sects, Factions and Schisms, has always been raised under the Watry Triplicity, so the Truth has been always Established, and the former Seminaries Punished under the Fiery, which now we are immediately under.

Lastly, my Opinion is, that this present War may not be so tedious, nor altogether of that Consequence many expect, but things will appear in quite another form in a short time, which brings along with it an Honourable and Lasting Peace, and that Trading will once more Flourish in our English Nation, to the Reviving of all drooping Spirits.

Of the Summer Quarter.

THe Summer Quarter is always said to begin, when this our Earthly Globe inclining Southward 23 Degrees, 29 Minutes towards the Sun, will volve and remove us her Northern Inhabitants to the greatest Portion of Day, or when

Wing, 1708.

when the Sun (according to Appearance) enters the first Scruple of \odot , which either way taken, falleth this Year on *Thursday* the 10th of *June*, 54 Minutes past Noon, at which time the Planets Places are as followeth, \odot $22^{\circ} 47' \text{II}$, ♄ $22^{\circ} 59' \text{III}$, ♂ $4^{\circ} 20' \text{IV}$, ♀ $15^{\circ} 23' \text{V}$, ♂ $5^{\circ} 31' \text{VI}$, ♂ $13^{\circ} 30' \text{VII}$, ♂ $3^{\circ} 26' \text{VIII}$. At the time of this Ingress 9 Degrees of ♊ Ascends, and 12 Degrees of \odot upon the Midheaven; and the Aspects at the time aforesaid are \square \odot ♄ , * \odot ♀ , * \odot ♂ , \square ♂ ♀ , \square ♂ ♄ , * ♂ ♀ , * \odot ♂ , \odot ♀ ♄ . From all which we may reasonably conclude of Variety of Action in several Places will be before the Summer ends. For the Signifiators represents several Countries and Persons, the Sea is pester'd by Pirates, and some Material Ingagements, the Land by petty Differences and Discontents, tho' our Affairs in *England* succeed better than formerly, under our Sovereign Lady Queen *ANNE*, and the Heavenly Bodies still promise better to this so much Envied Nation. To Conclude,

*Let's all Obedience to Superiors pay,
By Duty and respect Chalk out our way.
From Scism and Rebellion let's live free,
And constant in promoting Loyalty.
Be free from Faction, and such ill hatch'd Stuff,
Do all that's Good, and then we do enough.*

Of the Autumn Quarter.

THE Autumn or Harvest Quarter begins at such time as the Sun toucheth the first Scruple of the Equinoctial Sign ♊ , or more really when the Earth enters V , has volved her self at right Angles to the Sun, and receives a like Portion of Light and Darkness, which either way taken, hap-

Wing, 1708.

happens this Year on September the 12th Day, at 3 Minutes past 2 in the Morning, at which time 18 Degrees of Ω Ascends, and 3 Degrees of γ is on the Midheaven.

The Aspects and Configurations at the time of this Ingress are not very Friendly, but rather Foments and stirs up further Differences, \mathcal{Z} is in \triangle in \square both to \mathcal{H} and \mathcal{J} in \mathcal{S} , Creating new Differences in such Places as are subject to \triangle and \mathcal{S} ; some new War is like to break out, and not without great Contests about the Justice and Equity of their Proceedings on both sides. \mathcal{Z} presently after comes to \mathcal{J} of the \odot , which may shorten the War, however, let them timely consider, whether a long Peace be not to be preferr'd before a short War, and as there is a Peace promoted, 'tis pitty but it should be effected, for it either is, or ought to be consider'd, *Vita Mortalium brevis*.

Of the Winter Quarter.

THE Winter Quarter makes its entrance at such time as our Earthly Globe by its Circumrotation hath Volved it self to the greatest Northern Inclination, whereby we being farthest deflected from the Sun's Rays, receive least Light, and causes our shortest Day and longest Night, or (according to Appearance) when the Sun enters \mathcal{V} , which either way falls this Year on Friday the tenth Day of December 21 Minutes past 4, Afternoon. At which time 7 Degrees of \mathcal{S} Ascends, and 3 Degrees of \mathcal{X} on the Midheaven.

Of

Wing, 1708.

Of the Eclipses this Year.

There will appear this Year to the Inhabitants of this Earthly Star, Four Eclipses, two of the Sun, and two of the Moon, whereof three of the four will be Visible in England, the other not.

The first is an Eclipse of the Sun on the 11th of March, about 6 in the Morning, which cannot be Visible here. First, in respect the Eclipse is partly over before the Sun rise; and Secondly, if the Sun had been risen above the Horizon before the Eclipse had begun, it could not be Visible, in respect of the great South Latitude of the Moon, augmented by her Parallax.

The Second is a Visible Eclipse of the Moon, March the 25th Day in the Morning as followeth:

	H. ' "
The beginning is March the 25th at	4 19 6
Middle or greatest Obscuration	5 32 11
The true Opposition	5 39 4
The end or full recovery of Light	6 45 16
Total Duration	2 26 10
Beginning South	37 53
Lat. ☾ at End South	44 49
Digits Eclipsed	5° 29' 15"

The Third Eclipse is of the Sun, to be seen here in England if Clouds hinder not, September the 3d Day, in the Morning, according to the following Calculation.

	S. D.
	D. H. ' "
The middle Time is September	3 9 25 00
Apparent time of the true Conjunction	3 9 19 44
The Visible Conjunction	3 7 55 36
Interval Add	2 50
Middle or greatest Obscuration	3 7 58 26
	Semi-

Wing, 1708.

Semidiameter of the Moon	16	17	
Scruples difficient	17	01	
Digits Eclipsed	6° 2' 10"	06	02 10
The beginning of the Eclipse	Sept. 3.	07	03 22 } Morn.
The end of the Eclipse	3.	08	57 20 }
Visible Latitude } at the beginning		17	55 } No.
Visible Latitude } at the end		10	05 }

The Fourth is a visible Eclipse of the Moon on September the 18th Day in the Evening.

	H	'	"
The beginning is Sept. 18th Day at	8	19	55
Middle or greatest Obscuration	9	21	03
The true opposition	9	28	39
The end of the Eclipse	10	22	11
Total Duration	2	02	16
Latitude } at the beginning, North	43	15	
Latitude } at the end, North	46	51	
Digits Eclipsed	3° 55' 57".		

The two first of these Eclipses happen'd both in March, and the two later both in September, of which *Hermes* in his 53 Aphorism, in his Centiloquium informs us, *Fiunt in Mundo multa incommoda, quando erit in uno mense utriusq; luminaris Eclipsis, & precipue in his locis, quibus est significatio eorum specialis.* There shall many troubles happen in the World when both the Luminaries shall be Eclipsed in one Month, chiefly in those Places, subject to the Sign in which they happen. And on these Persons too, according to the 24 Aphorism of *Ptolomy's* Centiloquium. *Eclipsis luminarum in angulis vel Nativitatum, vel annuarum revolutionum nociva est.* An Eclipse of the Luminaries in the Angles either of Nativities, or Yearly Revolutions, is hurtful.

Wing, 1708.

A Table shewing the Longitude, Latitude, Right Ascensions, and Semidiurnal Arks, of 30 Principal Fixed Stars, Calculated to the first of January, 1710.

Names of the Stars.	Longitude.		Latitude		R. Ascen.		Sem. Ark.	
	S	O	O	N	H.	'	H.	'

By the former Table to find the exact time of the Rising, Setting, and Setting of the Fixed Stars there.

From

Wing, 1708.

From the right Ascension of the Star found in this Table
Subtract the right Ascension of the Sun, the Remainder is
the true time of Southing.

Examp. This present Year 1708, May 11 day, I would know
what Hour and Minute the Virgins Spick comes South.

	H. M.
Right Ascension V. Spick (12 ho. add) is	13 9 12
Right Ascension of the Sun, Subtract	3 57 00
Virgins Spick South at Night.	9 12 12

And if the Rising or setting be required, take out the Semi-
diurnal Arch of the said Star, which Subtract for the Rising
and add for the setting, to or from the Southing before found
to have you the rising and setting given.

	H. M.
<i>Examp.</i> Time of Southing as before	9 12 12
Semidiurnal Arch } for the Rising Subtract	} 5 3 12
} for the Setting Add	
Virgins Spick Rises Afternoon at	4 9 12
Virgins Spick Sets next Morning at	2 15 23

Pickworth in the County
of Rutland, 1707.

John Wing

A D V E R T I S E M E N T S.

MR. *James Smith*, The Famous Operator in Glafs, Son in Law to
the late Famous Mr. *William Boyce*, now lives at the Golden
Griffin in St. *John's-Lane*, near *Clarkenwell*, *London*; and performs
the same Operation in Glafs, especially in making all sorts of Arti-
ficial Eyes, so exactly like the Natural, having the very Motion to
so exactly, that they may be worn by any Person many Years, and
not known to their own Relations.

Artificial Teeth set in so well, as to Eat with them, and not to be
discovered from Natural; nor to be taken out at Nights, as
by some falsely suggested; but may be worn Years together. They
are an Ornament to the Mouth, and helps the Speech: Also Teeth
Clean'd and Drawn by *John Watts* Operator, who applies himself
wholly to the said Business, and lives in *Raquet-Court*, *Fleet-Street*.

F I N I S.
